

# ITC Ltd. — Financial Performance Analysis

Three-year analysis: FY 2022-23 to FY 2024-25 | Prepared by Rehaan Attri

## Executive Summary

ITC's Revenue from Operations increased across the three-year period. Liquidity remained comfortable, while profitability ratios rose sharply in FY25. The FY25 profit figure includes a significant discontinued-operations impact, so the increase should not be interpreted as purely underlying operating growth.

## Selected Indicators

| Indicator               | FY23      | FY24      | FY25      |
|-------------------------|-----------|-----------|-----------|
| Revenue (■ Cr)          | 76,518.21 | 76,840.49 | 82,282.80 |
| Profit After Tax (■ Cr) | 19,477.72 | 20,751.36 | 35,052.48 |
| Current Ratio           | 2.95x     | 3.00x     | 3.06x     |
| ROE                     | 28.01%    | 27.71%    | 49.79%    |

## Key Findings

- Revenue from Operations increased from FY23 to FY25, with stronger growth in FY25.
- FY25 PAT increased sharply; this includes the impact of discontinued operations and should not be treated as a like-for-like operating-profit comparison.
- Liquidity remained comfortable, with the current ratio improving across the three years.
- ROA and ROE improved substantially in FY25, reflecting the higher reported PAT.
- Total assets and equity fluctuated over the period rather than following a straight upward trend.

## Methodology

The project organizes the supplied consolidated financial data, calculates year-on-year growth, derives key liquidity/profitability/efficiency ratios, and interprets three-year trends.

## Data note

The project uses the supplied workbook as its working dataset. FY25 profit includes discontinued operations, and this accounting presentation is explicitly considered in the interpretation.
